

CITO Rule Puller

Exclusive at CITO:

The rule puller with clamping jaws for rules 2 to 8 pt

With the CITO Rule Puller, changing cutting, creasing and perforation rules on the die is child's play.

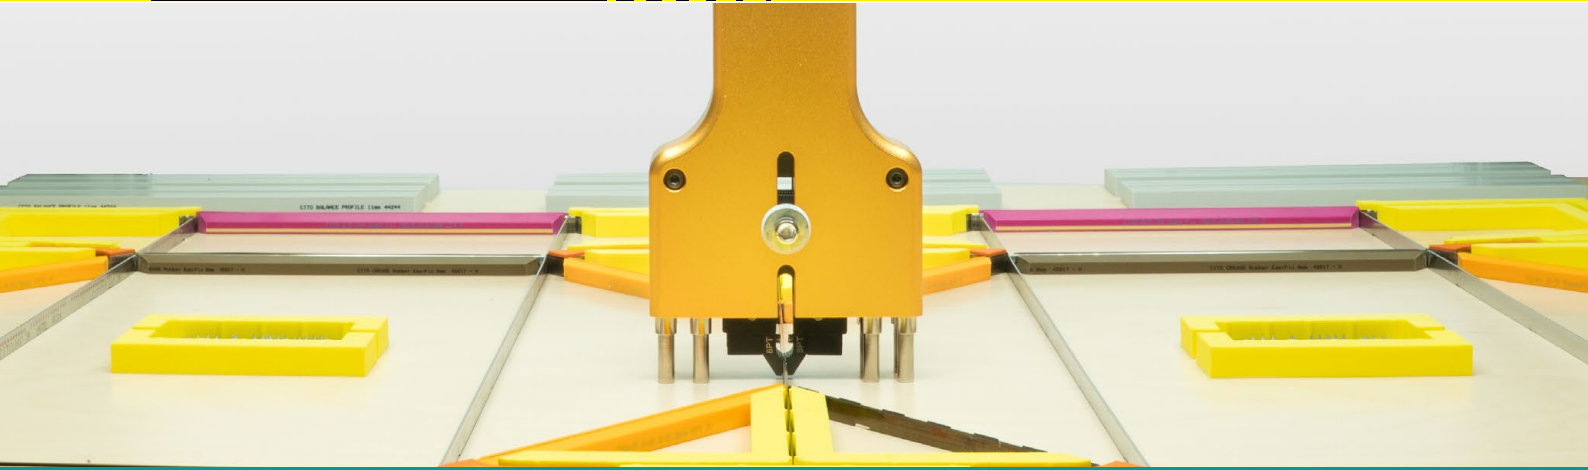

The CITO Rule Puller is suitable for use on both flatbed cutting dies and rotatory half-shells.

For particularly narrow areas, such as adhesive tabs with rule distances of less than 6 mm, special narrow clamping jaws are available for rules from 2 to 4 pt.

CITO thus offers a flexible solution for a wide range of requirements.

Your advantages at a glance::

- Suitable for rules from 2 to 8 pt without changing the clamping jaws
- Simple and efficient handling
- Vertical pulling forces enable the rules to be pulled without tilting.
- Interchangeable clamping jaws, allowing access even to closely spaced rules
- Magnetic foot pins allow the CITO Rule Puller to be positioned easily and flexibly at almost any point on the cutting die.
- However, if it is not possible to attach the rule puller with the pins, by using the plastic feet, the rule puller can be placed directly on other rules without damaging them.
- Suitable for both left-handed and right-handed users
- Replacement clamping jaws (wide and narrow) are available separately
- The set includes 2–8 pt clamping jaws and 2–4 pt narrow clamping jaws
